Lab06	Create ER Diagrams
DS604 Introduction to Data Management, Autumn'2026; pm_jat @ daiict	

This week you create ER Diagrams for given case studies. Use software Dia (http://dia-installer.de/) for creating ERDs.

Consider maintaining a database of books (let us say by an online book store) with details of ISBN, Title, Price (consists of Currency, and Amount), Author-Name, Publisher-Name, Publisher-Address. A book has one (at least) or more authors and is published by exactly one publisher. ISBN is a universally unique number each book has. A book can be reprinted by a different publisher in some other country or region. In that case reprint of the book is given a different ISBN, and will have a different price in some other currency. Let us also maintain the relationship of reprint with original publication.
